QR Code Link to This Post Hello I have a 1978 Chevy c20 for sale. It has a 350 with a 4 speed. I just installed the motor and tranny and added a brand new clutch. The truck needs a couple of small things fixed but will be a turn key driver once they are fixed. The gas needs to drained and more gas added because the truck has sat for a while. The truck needs a carburetor and the msd wiring fixed to run. Once those are fixed the truck will run. drive and stop without a problem. The truck also needs the exhaust installed but I have it in the bed. The headers are no longer on the Truck. The truck has stock manifolds on it
