

Leopard Tortoises (Chesterfield)

Location **Virginia**
<https://www.genclassifieds.com/x-257726-z>

Stigmochelys pardalis babcocki - This is the slightly smaller subspecies of leopard tortoise. However, they still reach around 12" - 16"

Please do your research before inquiring. These tortoises are a life long commitment and can easily live upwards of 80 years.

Their care is very simple once you have gotten your initial set up. They do require UVB lighting, a basking spot and high humidity as hatchlings to promote proper shell growth.

I am asking \$140 each. or two for \$250. They are about 4 months old.
