I am looking for someone to do a small job for me. I am presently seeking a small biz start up loan and need bid info for loan app., if I get the loan I will be able to hire for the job.

The job to me seems quite simple, I want to teach how to play chess w/o sight of the board, more commonly know as blindfolded. I want someone to program the board's coordinates in various sequences and patterns, then randomly. I will need a data base so users can monitor their login/log out times, progress, i.e. # of sessions, time per session, time per drill, # times each drill is run, etc.

Someone I talked to who seemed to know both suggested Java.

Plz send qualifications, bid, how long it should take, etc.

Thank.
