

LINCOLN SA200 Welder

Location **Montana**
<https://www.genclassifieds.com/x-372140-z>

This is a LINCOLN SA200 Welder.

It is a 1968-69 welder with a gas 4 cylinder continental engine.

It has an upgraded spin-on oil filter and an upgraded air filter assembly.

This welder starts right up and runs great!

I have owned this machine for the last 10 years.

This welder shows very little use.

The coolant was changed about 10 hours ago and it is set for -50 degrees.

All the electrical systems works great - charges at 13.8 volts and has a new battery!

The 115 volt circuit works great and comes with a power cord adapter.

You can barely even see any wear or feel any wear on the generating commutator bars or the excitation commutator bars. Take a look at the pictures and they show low hours on brushes and bars.

It welds gas and electric. It has no problems any trouble.
 It is a great welder in its weight (weighs about 100 lbs.)
 \$3500
 Thanks for looking
