

---

set up before I could drywall. They were able to come the next day. They had car problems but still came to my house and got the job done even though it was a late day for them. They worked with me to investigate how my foundation was laid out, (it was confusing b/c I have an addition on the back where the vent was coming out). I thought I needed to cut through the concrete but through investigating we found we didn't have to do that and we could funnel it in a crawl space behind the addition. The price was fair and they worked quickly. I liked that they didn't charge to come and quote me and they took the time to listen to me. Thanks again guys! Carla O.

Richard was on time and on budget. He was originally hired for plumbing but after I was happy with that job, he did electrical work on my pool as well! Joe M.

Richard and Tina were absolutely great. Richard is a licensed electrician but as we soon discovered he's a jack of all trades. I posted a need for swapping out 2 prong to 3 prong outlets, new gfci's outdoors, inspecting the outdoor hot tub breaker, inspecting the hot tub motor and to check out some ceiling fans that were malfunctioning. Richard responded and said he would come check everything out before quoting me. All the other respondents wanted money just to come out and check everything. Once he was here, he walked me through all the issues and half of the issues were simple fixes. I casually mentioned how we had a burst pipe in the basement, a cracked storm window and a leaky faucet and he said, "We can take care of that" And so they did. The pricing for all of this was VERY reasonable as well and they were extremely flexible on scheduling. All in all, R&T is our electrician/handyman/woman team from here on out and we will surely keep calling them. We've also recommended them to all of our friends who might need work. PS. We live in an old home in Cincinnati. Luis B.

Professional. Excellent customer service. Great attention to detail. Thank you. I will use your company again for all my future electrical needs. Kel D.

We needed to have some knob and tube wire removed at our 100 yr old home. Richard and Tina were very professional and knowledgeable. They were courteous of our time and also flexible. I highly recommend using their services. If there happens to be a mishap or something in question, they remedy it quickly and effectively. It is so nice and reassuring to have a contractor who is honest and reliable, not to mention a fair price. Thank you Richard and Tina. We will definitely use their services in the future. Kelly D.

I have used R and T Home Repair on three different occasions now. I would highly recommend this company to any customer needing home repair. They specialize in electrical and plumbing work but have done a roof repair and seal job and re-secured a chimney to the roof as well. They perform quality work in a timely manner at a fair price and in a very professional way. Let this note serve as my endorsement of R and T Home Repair. I handed them a repair list from a home inspection report and I was very impressed with the results. Multiple tasks were completed professionally, timely, and economically. What a refreshing way to get repair work done. Thanks R and T Jim.
