Why pay \$200-\$300 to re-due a hand cane chair that may be worth the same amount. Your burning the value of the chair by investing to much into it. Converting it to press cane not only looks the same, it is much less money than traditional hand caning.

Hand cane
 Convert to Press cane

It looks the same except the cane is woven through small holes around the seat frame. A converting process is done to cut a groove where the holes are to press cane. a wicker material called a SPLINE holds down the cane in the groove This will dramatically decrease the cost of replacing the seat giving it the same look as it was.
