The Hexapack method of packaging can replace the need to wood crate items approximately 80% of the time. Using the latest technology in weight redistribution, when a large amount of weight or

pressure is applied to Hexapack, it maintains structure while protecting the item inside. Hexapack consists of a layer of hexagonal cells with flat top and bottom. The interior is perforated to allow air to flow through. Hexapack is the wood crate alternative without the weight of wood. The foam cells cushion the item protecting the item without the use of excess packing material.

Hexabox is the revolutionary, strong, lightweight, green solution for your packing needs. The entire box and wrapping is made out of recycled material. Lighter than wood crates, yet just as strong. Less waste and less shipping costs!
