

220 gallon reef tank (Buckhead)

Location **Georgia**
<https://www.genclassifieds.com/x-504141-z>

I have decided to take down my 220 gallon reef tank. I would prefer to sell the tank as a complete set up. No new fish or coral have been added in the past 8 months to a year. If purchasing the tank, you will need to have a way to move it. It's on the first floor near an exterior door. When I originally purchased the tank I paid Matt and his crew from Creation Reef to move the whole set up.

Everything listed below is \$2500.

Livestock:

- Large Yellow Tang
- Blue Hippo Tang (came with original tank with HLLE) free with any livestock
- Melanurus wrasse
- 2 black and white & 1 orange clown fish
- 2 PJ cardinals
- Kole tang
- Various hermit crabs and snails, brittle starfish (will have to wait until all live rock has been removed)

200-300 pounds of live rock in the tank.

Coral:

- XL toadstool
- Acans
- Large coral/leather
- Cabbage leather attached to live rock
- Kenya trees
