This is a 1956 F-100 with a 351 Windsor, four barrel Holly carb, with a C6 transmission. It runs great! I pulled the engine out of a Ford Bronco and rebuilt it myself. This is a very strong engine. Since I rebuilt this engine I would guess there is less than 10,000 miles on it. The transmission shifter is on the floor. I installed power steering, that is why there is a smaller steering wheel. It has the original axles, gear ratio, and brakes. Everything works on this truck. Just installed an aluminum radiator to provide better cooling. Tires are in great shape. The oak bed is in great shape. There is some rust in the common areas of the cab and doors. See the pictures. The front end and the box is perfect. I also have the decorative stainless steel trim that goes around the front windshield and the gasket but they are not installed. This was originally the Fire Marshals truck and that is why it has the axe holder on the back. The axe does not come with the truck. I purchased this truck 18 years ago. At this point what ever money you put into this truck you will be able to get out. If interested give me a call at
