This is the laptop that I've had for a while: HP Pavilion Notebook zv5257LA (see photos above).

It's ancient.

I increased the RAM to 2 Gigs some years ago.

I have been XP Pro.

But the laptop now has a virus and it's not worth repairing.

I want to upgrade to something newer. I don't need to get the latest laptop. My needs are quite simple. The most important thing is being able to use WiFi at a coffee shop like Starbucks. And being able to do word processing.

Would love a MacBook that came out in late 2008 or later so that it can run OS X Yosemite (10.10).

Let me know if you have a MacBook you no longer need.

I'm interested in hearing from anyone who thinks he/she has a MacBook that can help me. We can negotiate the.
