Film and video transferred to DVD amp video files (Flatiron)

Location **New York** https://www.genclassifieds.com/x-711275-z

At Craven Films we can transfer your old videotapes - VHS, 8mm, and just about every other format, including PAL tapes - to DVDs and files that you can post anywhere on-line. We can also transfer your 8mm and 16mm films.

We will examine each tape or roll of film individually, and we can often (but not always, unfortunately!) repair damaged tapes or films. Your transferred footage will be of the highest possible quality

If you aren't sure what's on your tapes, we also offer the chance to screen them at Craven Films, in a comfortable environment, with free wi-fi. You can watch your VHS, S-VHS, VHS-C, 8mm, Hi 8, 3/4" Umatic, DV, DVCAM, DVCPRO, Betacam SP, Digital Betacam, HDV tapes, both PAL and NTSC. Screening of other formats can be arranged as well. Cost is \$25 for the first hour, and \$15 for subsequent hours. If you have a lot of tapes, we can offer you a flat rate for your screening.

Our prices are very reasonable, and vary based on the length of the tape or film to be transferred, and whether you want a DVD or a video file(s). Our service is quick with most orders completed within a day or two.

Editing of your footage, including adding music and sound effects, is available, and we can make as many DVD copies as you'd like.
