Find out how a custom designed database can help improve the way your organization utilizes information.

Relational databases can track and reference data about a variety of information about people, goods and services to do so much on a daily basis. You gain the ability to compile, evaluate and analyze information based on the criteria you specify. A custom designed database can improve the speed, efficiency and accuracy of the way in which your organization gathers and reports essential information. Custom database applications are most useful when the information you're working with is not suited to an off-the-shelf database product or when one or more related spreadsheets are no longer efficient. Project designs include Contact Management
Purchasing & A/P
Sales & A/R
Student Record Maintenance & Reporting
Subscriptions & Mailing Lists

Destination Travel Booking

Physical Therapy Patient Recordkeeping

Library Catalogs

Inventory Control

Fulfillment

Data Collection & Analysis

Specializing in Comfortable and Efficient User Interfaces: Beyond User Friendly! â„¢ As an MS Access database developer with a background in business operations management and over eighteen years experience designing and implementing relational databases in Microsoft Access, for wide variety of businesses, institutions, schools and non-profit organizations, I specialize in designing applications which professionals and "non-computer specialists" can understand and find easy to use. I enjoy the collaborative process and rely on good interpersonal communication to design applications appropriately suited to the task at hand. I strive for elegant simplicity. I also conduct individualized, on-site instruction in Access, and can add new functionality to existing databases. I would welcome the opportunity to design or refurbish a database for your business. I am local to the North San Francisco Bay area of California and provide in-person Access database design, development and support to San Rafael, Petaluma, San Anselmo, Sausalito, Mill Valley, Berkeley, San Jose, San Francisco and surrounding areas in Marin County and Sonoma County. I also work with organizations remotely throughout the United States. Please feel free to contact me to discuss your project ideas! Jacob Barnett
