QR Code Link to This Post I'm a subcontractor for a cabinet company looking for either a good installer or a helper. If your an installer you need to know how to set and level cabinets along with installing trim including crown. If your a helper the only experience I require is the ability and desire to learn. I have all the tools needed, all you need is a reliable vehicle to get to job sites and a tape measure. If you interested shoot me an email with a little about your job history and where you are located. This is the first step In a job interview so one liners like "are you still hiring" or " I'm a carpenter" will be ignored. Pay is based on experience and availability but I'm not afraid to pay a good wage for a good hard.
